

IN THE CLAIMS:

1. (Currently Amended) Device for automatically generating a game result based on at least one weather condition at at least one geographic location at at least one predetermined point or interval in time, the device comprising:
 - a processor;
 - a memory; and
 - communication capabilities being connectable to a first communication means associated with at least one weather parameter indication arrangement located at the at least one location and for indicating the at least one weather condition, the communication capabilities being connectable to a second communication means associated with at least one of a game computer and a game result indication means, the processor being configured for selecting at least one weather data item to receive depending on a weather type reference system, receiving the at least one weather data item from the at least one weather parameter indication arrangement at least one predetermined point in time, using the first communication means, the device being configured for generating the game result by relating the at least one weather data item to a weather game type reference system using a predetermined set of alternatives arranged in the memory, the weather game type reference system defining the game, and the device being configured for transmitting the game result to at least one of the game computer and the game result indication means, according to the weather game type reference system, for indicating the game result.
2. (Cancelled)
3. (Previously Presented) Device according to claim 1, wherein the device is configured such that generating of the game result is performed in relation to the predetermined point in time.
4. (Previously Presented) Device according to claim 1, wherein the second communication means comprises the first communication means.

5. (Previously Presented) Device according to claim 1, wherein the first communication means comprises at least one of wireless and wired communication and the second communication means comprises at least one of wireless and wired communication.
6. (Previously Presented) Device according to claim 1, wherein the weather parameter indication arrangement comprises at least one of a camera for providing a weather indicating image, a humidity sensor, a thermometer, a light intensity indicator, a rain gauge, a lightening indicator, an atmospheric pressure indicator, and a wind indicator.
7. (Previously Presented) Device according to claim 1, wherein the at least one weather parameter indication arrangement is at least one of movable; remotely located in relation to the device; and locally located in relation the device.
8. (Previously Presented) Device according to claim 1, wherein the game result indication means is one of remotely located in relation to the device and locally located in relation the device.
9. (Previously Presented) Device according to claim 1, wherein the game result indication means comprises at least one of a television, a computer, an information screen, a phone, a printing device and a personal digital assistant.
10. (Previously Presented) Device according to claim 1, wherein the device is incorporated in the game computer.
